Kimberly Rae Coaching: automation audit and build plan

Client: Mitch. Builder: Leah. Data pulled 2026-11-12, read only: Zapier export (23 Zaps), Close (config, 1,481 leads, 222 opportunities, status history, Sept 1 onward calls, SMS, email and sequence data), and every Airtable table and record in "Kimberly Rae Coaching - Master Base".

How to use this document

- Mitch: read the summary, Part 1 (how Close is set up) and Part 2 (the sales system, stage by stage). Part 5 has the evidence behind every issue.
- Leah: Part 3 is the list of small fixes. Part 4 has the architecture for every bigger fix and new build. Part 7 is the order to do them in. Part 6 lists the SOPs to write.

Every item has one of four verdicts:

- Keep: works, leave it.
- Fix small: change a step, a field or a setting. One-line instruction in Part 3.
- Fix big: rework something that exists. Full architecture in Part 4.
- Build new: doesn't exist today. Full architecture in Part 4.

Assumptions

Kit and DocuSign couldn't be accessed. The plan assumes:

- Kit is used for email blasts only, not pre-call.
- DocuSign is used to send agreements by hand.

If either turns out to be wrong, only the matching item in Part 4 changes.

Calendly was checked on 2026-11-13 (event types, team members, webhooks, and every booking since Sept 1). Its reminder timing and Workflows aren't visible through the API on this plan (Enterprise only), so those need a look inside Calendly.

What Calendly shows

Event type	What it is	Bookings since Sept 1	Canceled
KRC Consultation Call - (SB)	Booked by a setter for the lead	28	5 (3 were reschedules)
KRC Consultation Call - (DCBA), (DCBIG), (DCBE)	Booked directly by the lead from three different links	97	58 (55 canceled by the host, 3 reschedules)
Live Interview	Live transfer to Makena	6	0
Kickoff Session	Client kickoff with Kimberly	10	4

- DCB means direct call booking: the same 45-minute consultation call, booked by the lead without a setter. The letters after it look like the link's source (A = ads, IG = Instagram, E = email). Mitch should confirm.
- All consultation calls are round robin with Makena as the only host. There's no separate triage call type. Every booked call is a closing call.
- 55 of 97 direct bookings were canceled by the host, with no reason recorded. That looks like closers screening out unqualified direct bookings. None of those cancels reach Close (no cancel webhook exists): 10 of those leads still sit at "New Lead - DCB" and 20 still hold an open $7,200 deal. This is the main source of the inflated pipeline.
- Calendly is collecting a text-reminder number on 39 of 97 direct bookings, so Calendly text reminders are switched on for those links. Setter bookings almost never have one (1 of 28).
- Calls happen a median of 29 hours after booking. A quarter happen within 16 hours.
- Calendly sends Zapier three "new booking" webhooks (setter booking, direct booking, kickoff) and nothing for cancellations.

Summary for Mitch

The day-to-day machinery runs: leads reach Close, the team gets pinged in Slack, closers file EOCs. The gaps fall into three groups.

1. The numbers are wrong. Paid vs organic never fires at lead level (0 of 825 leads count as paid). Monthly finance totals leave out renewals ($22,800 shown for October against $27,400 collected). Deposits and installment payments count as new closed deals.
2. The pipeline is inflated. Every booking and reschedule creates a new $7,200 deal. Close shows $700,800 of open pipeline, $136,800 of it on leads that are DQ'd, canceled or already signed.
3. Follow-through is missing. No pre-call reminders run from Close. There's no no-show, cancel or reschedule drip. Follow-up dates don't create tasks. Fathom recordings never reach Close. Signed agreements update nothing.

The plan:

- 22 small fixes
- 6 bigger fixes, plus 2 optional
- 10 new builds, plus 1 optional
- 17 SOPs to write
- Everything else stays as it is
- 55 issues logged: 4 critical, 25 high, 19 medium, 7 low

Decisions already made:

1. Fanbasis payments update Close.
2. A deposit is not a closed deal.
3. Keep the current Close structure. Change only what's strictly necessary.
4. Every follow-up date creates a Close task.
5. Pre-call texts and emails run from Close. Calendly reminders get switched off once they're live.
6. Signed agreements update both Slack and Close.

Part 1: how Close is set up today

Close has one pipeline, "Sales". It isn't split into setter and closer pipelines.

Deal stage	Type	Deals now
New Deal - Mentorship Interview	Open	68
New Deal - Pending Close	Open	29
Installment Pending	Open	1
Deposit Paid	Won	5
New Deal - Closed	Won	8
Installment Paid	Won	7
New Deal - Lost	Lost	104

Deals only start when a call is booked. There's no "Not Booked" stage.

The setter and closer split lives in lead statuses instead:

Group	Lead statuses (current count)
Setter side	New Lead (1,258), New Lead - DCB (20), Setter Pipeline (0)
Closer side	New Opportunity (21), New Opportunity - Reschedule (1), Closer Follow Up (33), No show (15), Canceled (30)
Outcomes	Deposit Paid (3), Signed Up - Balance Owed (2), Signed Up - Closed (11), DQ (69), NGMI (18)

Who owns a lead is tracked in two custom fields, Setter Owner and Closer Owner.

The problem: the same process is tracked twice. The lead status says where the person is, the deal stage says where the money is, and nothing keeps them in sync. That's how 15 dead or signed leads still hold open deals.

Approach: keep this structure. The plan changes only what's strictly necessary. Drips trigger off the lead statuses closers already set (No show, Canceled, New Opportunity - Reschedule). The pipeline gets one new stage, Not Booked, plus a hidden field that stores each lead's current deal ID so automations always update the right deal (FS-20). That alone stops the duplicate and dead deals.

Part 2: the sales system, stage by stage

1. New lead comes in

Item	Today	Verdict	Ref
Lead created in Close	6 form Zaps: IG Typeform, Paid Ads Typeform, Kajabi application, 3 Kajabi freebies	Fix small: stop resetting status and overwriting source on existing leads	FS-08
Deal created at "Not Booked"	No. Deals only start at booking	Build new	N1
Webinar exception	No webinar source exists	Not needed today	
New lead posted to Slack	Yes, the NEW APPLICATION channel ("Dial ASAP")	Keep. Fix small: freebies get their own channel	FS-10
Sources tracked	Opt, Applied and Book Source fields	Fix big: overwritten on every new form, free text, Traffic Type never filled	N2
Typeform data tracked	Answers saved as a note. Name, email and phone go into fields	Fix big: add UTM tracking and map key answers to fields	N2

2. Call booked

Item	Today	Verdict	Ref
Deal moves Not Booked to Booked	Creates a new $7,200 deal on every booking and reschedule	Fix big	B1
Triage vs closing call	No triage call type exists. Every booking is the same 45-minute consultation call with Makena (setter-booked or direct) or a live transfer	Keep	
Assigned to the right person	Closer matched from the Calendly host into Closer Owner	Keep. Fix small: make the match exact	FS-14
Booking posted to Slack	Yes, the bookings channel	Keep	
Booking source tagged	Book Source field. The direct-booking Zap labels every booking "Paid Ads"	Fix small	FS-15
Setter claims the booking (✅ reaction)	Works, but reads the lead's email out of the Slack message text	Fix big	B2

3. Pre-call

Item	Today	Verdict	Ref
Instant text and email on booking	Nothing in Close. Calendly sends its confirmation	Build new in Close, then switch Calendly's off	P1
Reminder texts and emails before the call	Nothing in Close. Calendly sends reminders, with texts only to the 40% of direct bookers who give a number	Build new in Close, then switch Calendly's off	P1

Item	Today	Verdict	Ref
Kit enrollment on booking	Booking Zaps add every booked lead to a Kit sequence and tag	Fix small: run after Close. Confirm it's a blast list, not a pre-call sequence	FS-09

4. What happened on the call

Item	Today	Verdict	Ref
Call outcome (EOC)	Airtable form plus an 88-step Zap	Fix big: code step plus a short set of writes. Small fixes in the meantime	C1, FS-01 to FS-06
Showed / no-show tag	Not stored on the lead or deal	Fix big (part of C1)	C1
Fathom recording on every call	Closers paste the link into the EOC (183 of 183). Never reaches Close	Build new	C2
Fathom summary to Slack	No. Slack gets the typed EOC summary	Build new	C2
EOC summary to Slack	Yes	Keep	
Follow-up task from follow-up date	No	Fix small now, then part of C1	FS-03

5. No-show, cancel, reschedule

Item	Today	Verdict	Ref
Closer moves lead to No Show	Lead status "No show"	Keep	
No-show alert to Slack	Yes	Keep	
No-show drip ("you missed your call, book here")	None	Build new	R1
Cancel alert to Slack	Yes, but only when someone changes the status by hand	Keep. Calendly cancel trigger added in R2	R2
Cancel drip	None	Build new	R2
Reschedule alert to Slack	Yes	Keep	
Reschedule handling and drip	Reschedules create a duplicate deal. No drip	Build new	R3

6. Smart lists for setters

List	Today	Verdict	Ref
Day-old leads	"Gold Rush" and "Gold Rush (Paid Ads)"	Fix small: both filter on "last updated", which Zaps reset. Paid Ads view shows 94 of 223 paid leads	FS-19
3 to 7 day leads	"3 Day No Book" covers 0 to 3 days	Fix small	FS-19
No-shows	"No Shows"	Fix small: same "last updated" problem	FS-19
Cancellations	None	Build new (small)	FS-19
Reschedules	None	Build new (small)	FS-19
New applications	"New Apps"	Keep	

7. Money

Item	Today	Verdict	Ref
Payment received alert	Fanbasis new sale and renewal Zaps post to Slack	Fix big: also update Close, link to client and rep, store transaction ID	M1
Deposit counted as closed deal	Yes, in Close and Airtable. Installment payments also count as closed deals	Fix small	FS-05, FS-06
Payment plans	Tracked as extra deals in Close and as records in Airtable. Only Close gets updated	Fix small: stop creating installment deals in Close	FS-21
Failed payment alert	None	Build new	M2
Refund automation	None. Refunds entered by hand	Build new	M3
Off-platform payments (Whop, Stripe, Shopify)	EOC skips them, and nothing else records them	Fix small	FS-11

8. Agreement and handoff

Item	Today	Verdict	Ref
Agreement signed alert	"New Contract > Slack" Zap exists but is off. Should update Slack and Close	Fix big	A1
Welcome email	Yes, fires from the EOC	Keep (moves into A2)	A2
Intake form to Slack	Yes	Fix big: also write to Close	A2
Kickoff booked to Slack	Yes	Fix big: also write to Close, remind if not booked	A2

9. Reporting

Item	Today	Verdict	Ref
Sales and finance tables in Airtable	Exist. Paid flag, renewals and deposits make the numbers wrong	Fix big	D1
Weekly/monthly update (leads, show rate, close rate, cash)	None	Build new	D2
Weekly data check	None	Build new, optional	D3

10. Team

Item	Today	Verdict	Ref
Rep onboarding Zap	Exists. Every new account gets the same password	Fix small	FS-13
Rep onboarding SOP	None	Build new	T1
Rep offboarding SOP	None	Build new	T1
Setter EOD and EOD reminder	Work	Keep	

11. Close structure

Item	Today	Verdict	Ref
Pipeline and lead statuses	One pipeline, setter and closer stages in lead statuses	Keep. Fix small: add a Not Booked stage and an Active Deal ID field	FS-20
Close users, phone numbers, SMS	4 active users, SMS working	Keep	

Part 3: small fixes

Each is a single change to an existing Zap, field or setting. Do them first.

ID	Where	Change
FS-01	EOC Zap, Code step	In Input Data, `amt_3` is mapped to "Date of 3rd Instalment". Map it to "3rd Instalment Amount".
FS-02	EOC Zap, every "Update Lead in Close" step	Add the field Fathom URL = EOC "Fathom Share Link".
FS-03	EOC Zap, "No Close / Follow Up" path	Add "Create Task in Close": lead = found lead, assigned to the closer's Close ID, due date = "Follow Up Date", text = "Follow up: {{Lead Full Name}}". Only runs when Follow Up Date has a value.
FS-04	EOC Zap, every Close step with value `{{...}}00`	Add a Formatter step (Numbers, Spreadsheet-style formula, `ROUND({{Cash Collected}}*100,0)`) and map its output instead. Same for each installment amount. Then fix the $11.33 deal by hand.
FS-05	Close settings, Sales pipeline	Change "Deposit Paid" from Won to Active.
FS-06	Airtable, EOC table, `Closed Deals` formula	`IF(AND({Call Outcome}="Closed",{Payment Type}!="Deposit",{Payment Type}!="Instalment Paid"),1,0)`
FS-07	Airtable, Lead Base, `Is Paid` formula	Replace "Paid Ad" with "Paid Ads" in all four comparisons.
FS-08	IG, Paid Ads, Kajabi application and 3 Kajabi freebie Zaps, "Lead Exists" path, "Update Lead" step. Setter Booking and DCB Booking Zaps, "Lead Exists" path	Form Zaps: remove the Status, Opt Source and Applied Source fields (keep the note). Booking Zaps: remove Opt Source and Applied Source (keep Book Source).
FS-09	Setter Booking, DCB Booking, Kajabi application and 3 freebie Zaps	Drag the two Kit steps to after the last Close step.
FS-10	3 Kajabi freebie Zaps, Slack step	Change the channel from NEW APPLICATION to a new low-priority freebie channel. Remove "Dial ASAP" from the message.
FS-11	EOC Zap, 4 Payment Method filters	Remove the Whop, Shopify and Stripe conditions. Keep Fanbasis.
FS-12	Airtable, Rep Scorecard, Rep Name dropdown	Rename "Sidonie Claurans" to "Sidonie Chechin" (the name used everywhere else).
FS-13	New Rep Onboarding Zap, Google Workspace step	Turn on "Change password at next login".
FS-14	Setter Booking and DCB Booking Zaps, "Find Record" in User ID Lookup	Set "Exact match" to Yes.
FS-15	DCB Booking Zap, Close and Airtable steps	Replace the hardcoded "Paid Ads" with a lookup on the Calendly event name: DCBA = Paid Ads, DCBIG = Instagram, DCBE = Email. Calendly confirms these are three separate direct-booking links; Mitch confirms the letters before the change.
FS-16	Fanbasis Renewal Zap, Airtable step	Map the Date field (one renewal currently has no date).
FS-17	Zapier	Delete "Untitled Zap" (empty draft).
FS-18	Close and Airtable data	Close the 15 dead deals. Merge duplicate deals on 7 leads. Merge the 15 duplicate-email lead groups. Link the 18 orphan payments to customer and product. Fix the $11.33 deal.
FS-19	Close smart views	See the table below.
FS-20	Close settings	Add a pipeline stage "Not Booked" (Active) at the start of the Sales pipeline. Add a hidden lead custom field "Active Deal ID" (text). Nothing else in the pipeline or lead statuses changes.

ID	Where	Change
FS-21	EOC Zap, "Payment Plan (Create Opportunities)" path and "Instalment" path	Delete the Close "Create Opportunity" steps (Instalment 2 to 6, and the new deal on Instalment Paid). Keep the Airtable installment records. Leave the two installment stages in Close; they just stop getting new deals.
FS-22	EOC Zap, every Close "Update Opportunity" step	Map the opportunity ID from the lead's "Active Deal ID" field (FS-20) instead of the "Find Opportunity" result, which returns whichever deal Close lists first.

FS-19 smart views:

View	Change
Gold Rush (day-old leads)	Replace "lead updated not in last 24 hours" with "lead created in the last 1 day" and "last call not within last 24 hours".
Gold Rush (Paid Ads)	Change the three source conditions from AND to OR, then apply the same date fix.
3 Day No Book	Rename to "3 to 7 Day Leads". Created between 3 and 7 days ago, status New Lead, no booking.
No Shows	Replace "lead updated" with "last call not within last 6 hours".
Cancellations (new)	Status Canceled, last call not within last 6 hours.
Reschedules (new)	Status New Opportunity - Reschedule, last call not within last 6 hours.

Part 4: architectures for bigger fixes and new builds

Each spec covers what it does, the trigger, the steps in order, and how to test it. IDs in `code` are the real Close IDs.

N1. Deal created at Not Booked (Build new)

- Added to the 6 form Zaps, after the Close lead step, in both the "Lead Exists" and "Lead Does Not Exist" paths.
- Steps: 1. Close "Find Opportunity" on the lead, status type Active. 2. Filter: continue only if no active deal was found. 3. Close "Create Opportunity": stage Not Booked, no value, note = source. 4. Close "Update Lead": write the new deal's ID to a lead field "Active Deal ID". B1, C1 and M1 use this field so they always update the right deal.
- Test: new lead creates one deal. A second form from the same lead creates nothing new.

N2. Sources and Typeform tracking (Fix big)

Uses the existing fields. Nothing gets renamed or converted.

- What each existing field means from now on:
- Opt Source: where the lead first came from. Written only when the lead is created (FS-08 stops the overwrites).
- Applied Source: the most recent application form.
- Book Source: where the call was booked from (B1).
- Traffic Type (exists, never filled): Paid or Organic, set from Opt Source when the lead is created.
- Typeform: add hidden fields `utm_source`, `utm_medium`, `utm_campaign`, `utm_content` to both forms and pass them through the ad and landing page links. Add matching text fields in Close and map them in the IG and Paid Ads Zaps. All answers keep going into the note as today.
- Airtable: FS-07 fixes the paid flag. Optional later: have Airtable read Traffic Type from Close instead of matching text.
- Test: submit each form with UTM parameters in the link. The fields fill in Close. Submit again from the same email; Opt Source must not change.

B1. Booking sync (Fix big)

Applies to the Setter Booking and DCB Booking Zaps. They can stay separate.

- Trigger: Calendly invitee created (unchanged).
- Steps: 1. Filter: event type is one of the mapped sales events. 2. Branch on `old_invitee`. If present, it's a reschedule: go to R3 steps and stop. 3. Find the lead in Close by email (lowercased). Create the lead if missing (N1 rules). 4. Find the deal using the lead's Active Deal ID. If there is none, create one. 5. Update the deal: stage New Deal - Mentorship Interview (the existing booked stage), owner = closer (exact match on host email), call date and time as a full datetime with timezone, Calendly event URI stored on

the deal. No $7,200 placeholder value. 6. Update the lead: status New Opportunity (existing), Booking Source, Active Deal ID, Last Touch, Closer Owner, Date Of Call. 7. Slack booking post (unchanged), including the Close lead ID for B2. 8. Airtable Lead Base update. 9. Kit steps last (FS-09).

- Remove the `rescheduled = False` filter. Calendly sends reschedules as new bookings with `old_invitee` set, so step 2 handles them.
- Test: new booking, second booking by the same lead, reschedule, booking at 9pm Eastern (date must stay correct).

B2. Setter claim via ✅ (Fix big, optional)

It works today. This only makes it harder to break. Do it after everything else.

- Keep the habit: setter reacts ✅ on the booking post.
- Change: the B1 Slack post ends with a line `Lead ID: lead_xxx`. The Zap pulls that ID with one Formatter "Extract pattern" step (`lead_[A-Za-z0-9]+`) and updates the lead directly.
- Remove the email, date and rep text-matching steps.
- Setter is identified by Slack user ID through the User ID Lookup table (exact match).
- Test: react on a booking post. Then edit the message wording and react again; it must still work.

P1. Pre-call sequence in Close (Build new)

- Built as a Close Workflow with email and SMS steps, sent from the closer's Close number.
- Enrollment: either Close's own trigger (enroll leads when they enter a smart view of status New Opportunity), or a step at the end of B1 that enrolls the contact. Use whichever the Close plan supports. If Close can't run it, keep these messages in Calendly instead (immediate, 24 hours, 1 hour) and skip the switch-off step below.
- Steps (times relative to booking and call): 1. Immediately: text and email confirming the time, the meeting link, and what to prepare. 2. 24 hours before: text and email reminder. Skipped if the call was booked less than 24 hours out (a quarter of calls are booked within 16 hours). 3. 1 hour before: text and email with the meeting link.
- Exits: the lead status changes to No show, Canceled, a won or lost status, or the call time passes.
- Reschedules: R3 restarts the workflow with the new time.
- Once live: switch off Calendly's reminder emails so leads don't get doubles. Keep Calendly's booking confirmation if Mitch wants it.
- Close Workflows schedule steps by delay from enrollment, not from the call time. If the plan can't schedule relative to the call, use a Zapier "Delay Until" chain from B1 instead (one Zap, four delayed Close "Send SMS" and "Send Email" steps).
- Test: book a call 25 hours out and watch all three messages arrive on time.

C1. EOC Zap rebuild (Fix big, optional but recommended)

The small fixes (FS-01 to FS-06, FS-11, FS-21, FS-22) make the current Zap correct. This rebuild makes it maintainable: any future change happens in one place instead of six copies.

The current Zap has 88 steps because the same Close and Airtable steps are copied into every outcome path. The rebuild keeps the Airtable EOC form and moves every decision into one Code step.

- Code: `kimberly-rae/code/eoc-decide.js` in the repo. It's tested against the real outcome and payment type values. It outputs the lead status, deal stage, deal value in cents (fixes the $11.33 bug), whether it counts as a closed deal (deposits and installment payments don't), whether to create a follow-up task, the installment list, and the Slack summary. Unknown outcomes or an incomplete payment plan stop the run with an error instead of writing bad data.
- Steps: 1. Trigger: Airtable new EOC record (unchanged). 2. Code by Zapier: `eoc-decide.js`. 3. Close: find lead by email (lowercased). 4. Close: update lead (status, Closer Owner, Setter Owner, Fathom URL, Showed). 5. Filter for the next step: `update_opp` = yes. 6. Close: update the deal found by the lead's Active Deal ID (stage, value, date won). 7. Close: add the Slack summary as a note. 8. Paths:
  - Path A, follow-up (`create_followup_task` = yes): Close create task due on `followup_due`, assigned to the closer.
  - Path B, closed deal (`counts_as_closed_deal` = yes): Airtable upsert Customer and Customer Product (keyed on Close lead ID plus product). If `has_plan` = yes, Looping by Zapier over the installment line items creates the installment records. If `needs_onboarding` = yes, hand off to A2.
  - Path C, off-platform payment (payment method isn't Fanbasis, Whop, Shopify or Stripe): Airtable create Payment Record. 9. Airtable Lead Base update. 10. Slack: post `slack_message`.
- Roughly 15 steps instead of 88. Status IDs live in one config block at the top of the code.
- Test every outcome: No Show, Cancelled, Reschedule, Disqualified, Lost, Offer Made, 2-call close, Closed PIF, Closed on a plan, Deposit, Instalment Paid, Setter Takedown, cash with cents, missing follow-up date.

C2. Fathom to Close and Slack (Build new)

- Check first whether Fathom's built-in Close integration is available on their Fathom plan. If it is, turn it on and skip the Zap's Close steps.
- Otherwise, a Zap: 1. Trigger: Fathom "New Recording" (sales call meeting types only). 2. Close: find the lead by the external attendee's email. 3. Close: update lead Fathom URL, and add a note with the Fathom summary and action items. 4. Slack: post the summary and link to the calls channel.
- If no lead matches, post to Slack with "No Close lead found" so someone links it by hand.
- Zoom recordings: Fathom records the Zoom call. Separate Zoom cloud recording only matters if Mitch wants a backup; it isn't required for this flow.
- Test: one recorded test call with a known lead.

R1. No-show drip (Build new)

- Trigger: the closer sets the lead status to "No show" (as today).
- Close Workflow, from the closer's number and email: 1. Within 5 minutes: text "Looks like we missed you. Grab a new time here: [booking link]". 2. Same time: email with the same link. 3. Day 1: text. 4. Day 3: text and email. 5. Day 7: final email.
- Exits: they book again (B1 moves the deal to Booked), reply, or the deal is marked Lost.
- Existing No Show to Slack Zap stays.

- Test: move a test deal to No Show and confirm the first text arrives within 5 minutes.

R2. Cancellations (Build new)

Calendly shows two kinds of cancels, and they need different handling. Host cancels (55 of 58 on direct bookings) look like closers screening out unqualified leads. Lead cancels are people who need to be won back.

- New Zap: Calendly "Invitee Canceled", filtered to `rescheduled` = false (real cancellations only). Add a cancellation reason as a required field on host cancels in Calendly.
- Steps: 1. Close: find the lead by email. 2. Paths:
  - Canceled by the lead: lead status Canceled. The existing Canceled to Slack alert fires. The cancel drip starts.
  - Canceled by the host: lead status DQ, deal moved to Lost with the Calendly cancel reason. No drip. 3. Note on the lead with who canceled and why.
- Cancel drip (Close Workflow, same shape as R1): text within 5 minutes with the booking link, email, then text on day 1 and day 3.
- Exits: rebooked, replied, or Lost.
- Cleanup with this build: the 10 direct bookers still at "New Lead - DCB" and the 20 open deals from host-canceled bookings (included in FS-18).
- Test: cancel a test booking as the lead, then as the host. The lead cancel starts the drip; the host cancel sets DQ and starts nothing.

R3. Reschedules (Build new)

- Calendly reschedules arrive in B1 with `old_invitee` set. Steps: 1. Find the deal by the old Calendly event URI. 2. Update the call date and time. 3. Restart P1 for the new time. 4. Post to Slack (the existing reschedule alert).
- No new deal.
- Lead asks to move the call but hasn't picked a new time: the closer sets the lead status to "New Opportunity - Reschedule" (exists today). A Close Workflow sends a text and email with the reschedule link right away, then again on day 1 and day 3.
- Test: reschedule a test booking. Exactly one deal with the new time, reminders follow the new time.

M1. Payment received (Fix big)

Applies to the Fanbasis New Sale and Fanbasis Renewal Zaps.

- Steps: 1. Airtable: search Payment Records for this Fanbasis transaction ID. Stop if found (no doubles). 2. Close: find the lead by email (lowercased). If none, post "Unmatched payment" to Slack with the details and stop. Never drop it silently. 3. Airtable: create the Payment Record with transaction ID, Close lead ID, links to Customer and Customer Product, gross amount, and net from Fanbasis creator earnings (same field for sales and renewals, no hardcoded 3.9%). 4. Airtable: if an installment is open for that customer

product, mark the oldest unpaid one paid and link the payment. 5. Close: if the deal is at Deposit Paid or Follow Up and the EOC marked it closed, move it to Won. Set lead status Signed Up - Closed, or Signed Up - Balance Owed if installments remain. 6. Slack: both payment alerts, last.
- Commission formulas then work, because every payment has a closer and setter through the customer product.
- Test: new sale, renewal, the same webhook twice, a payment from an email not in Close.

M2. Failed payment alert (Build new)

- Trigger: Fanbasis failed or declined payment, if available in Zapier. If not, a daily check of Instalment Records past due with no payment.
- Steps: Slack alert to the payments channel with name, amount and product. Close task for the deal owner. Note on the lead.
- Optional: a text to the client with the update-card link.

M3. Refunds (Build new)

- Trigger: Fanbasis refund or dispute, if available. If not, an Airtable refund form.
- Steps: create the Refund Record linked to the payment, customer and product. The clawback formulas already exist. Add a note in Close. If fully refunded, move the lead out of Customer. Slack alert.

A1. Agreement signed (Fix big)

- Turn the "New Contract > Slack" Zap back on and add: 1. Close: find the lead by the signer's email. 2. Close: set "Agreement Signed" date on the deal and add a note with the document name. 3. Slack post (existing step).
- If DocuSign sends from a template, later improvement: C1 sends the agreement automatically when a deal closes.

A2. Onboarding and fulfillment handoff (Fix big)

- Trigger: deal Won (from C1 or M1). The welcome email moves here from the separate Onboarding Email Zap.
- Steps: 1. Welcome email (existing copy). 2. Slack post to the fulfillment channel with client, product and Close link. 3. Intake form submitted (existing Zap): also add a note on the Close lead. 4. Kickoff booked (existing Zap): also add a note and a "Kickoff Booked" date on the Close lead. 5. If no kickoff is booked within 48 hours of Won: reminder email and text to the client, plus a Slack nudge to fulfillment.

D1. Reporting data fixes (Fix big)

- Renewals missing from monthly totals: inside Airtable, check the automation that links payments to reporting periods. Renewals have no product or customer link (fixed by M1), which is the likely reason they're skipped. After M1, relink the 6 missing payments by hand.

- Optional: add a Close lead ID field to the Airtable tables and backfill, so tables join on IDs instead of emails and names, and Lead Base covers all 1,481 Close leads (825 today).

D2. Weekly and monthly sales update (Build new)

- Trigger: Zapier Schedule, Monday 8am Eastern (weekly) and the 1st of the month (monthly).
- Steps: Airtable "Find Records" (or a Code step totaling a filtered view) for the period, then a Slack post:
- New leads, by source
- Calls booked
- Shows and show rate
- Offers
- Closed deals (excluding deposits) and close rate
- Cash collected (new vs recurring)
- Deposits outstanding
- Depends on FS-06, FS-07, M1 and D1. Without those, the numbers will be wrong.

D3. Weekly data check (Build new, optional)

- Monday Slack post to an ops channel listing:
- duplicate leads by email
- leads with more than one open deal
- open deals on DQ or Lost leads
- payments without a customer link
- EOCs without a Close lead ID

T1. Rep onboarding and offboarding (Build new SOPs, Fix small on the Zap)

- Onboarding Zap: keep it and apply FS-13. Also write the new rep's Slack ID and Close user ID into the User ID Lookup table.
- SOPs: see SOP-12 and SOP-13 in Part 6.

Part 5: issues register

Severity: Critical means reported numbers or revenue are wrong. High means leads or money are being mishandled. Medium means data quality or operational risk. Low means hygiene.

Status: Confirmed means checked against the data or Zap config. Inferred means the effect is confirmed but the cause sits where the APIs can't see (Airtable automations, Calendly, Kit). Unverified means not yet checked.

ID	Sev	Issue	Evidence	Status	Fix
ISS-01	Critical	Lead-level paid flag never fires. Lead Base `Is Paid` checks 4 source fields for "Paid Ad"; Zaps write "Paid Ads".	0 of 825 leads paid. Sales Metrics All Time: Paid Leads 0, Organic Leads 825. Paid set rate, paid CPL and paid cash per lead are all wrong.	Confirmed	FS-07, N2
ISS-02	High	Two definitions of "paid". Calls and cash use a manual `Lead Source` dropdown on the EOC (85 Paid, 98 Organic); leads use automation tags. The two halves of the paid funnel can't be compared.	EOC formula `Paid: Closed Deals = IF(AND({Lead Source}="Paid",{Closed Deals}=1),1,0)`	Confirmed	N2
ISS-03	Medium	Ad Spend table is empty, so ROAS, CPA and CPL read $0.	0 records	Confirmed	Not planned. ROAS stays blank until ad spend is entered.
ISS-04	Critical	Fanbasis renewals and back-dated payments aren't linked to calendar periods, so monthly and yearly finance totals are understated.	All 5 renewals plus 1 back-dated payment are missing from their calendar month: Aug $2,400, Sep $1,200, Oct $4,600. One renewal ($2,400) has no date at all. "October 2026" shows $22,800 vs $27,400 actual. "2026" shows $77,783 vs "YTD" $85,983.	Confirmed (effect). Cause inferred: the Airtable automation that links periods appears to require data the renewal Zap doesn't set (renewals have no Product or Customer link). The Airtable API doesn't expose automations, so this needs a look inside Airtable.	D1, D1
ISS-05	Critical	Deposits and installment payments count as closed deals, against the business rule.	Airtable `Closed Deals` = 1 whenever Call Outcome is "Closed", so all 6 Deposit EOCs and all 6 Instalment Paid EOCs count as new closed deals. Close pipeline stage "Deposit Paid" is a won stage (5 opps).	Confirmed	FS-05, FS-06, C1
ISS-06	High	Duplicate EOC submissions double-count outcomes.	3 lead/date pairs have two EOCs: Closed + Closed, Closed + Offer Made, No Show + Disqualified.	Confirmed	C1 (one EOC per call; dedupe on lead ID and call date)

ID	Sev	Issue	Evidence	Status	Fix
ISS-07	Critical	Slow speed to lead and many leads never contacted.	Leads created Sept 1 to Nov 12 (421): 27% have no outbound call or SMS in Close, median first touch 100 minutes, 82 reached within 5 minutes. Paid Ads: 6% untouched, median 114 minutes.	Confirmed (measured from Close activity; IG DMs and personal-phone calls aren't captured)	N1 (Slack alert), L1 (smart lists), P1
ISS-08	High	Freebie opt-ins post to the applications channel with "Dial ASAP", burying real applications.	3 freebie Zaps use the same channel as applications. Untouched rates: Anxious to Confident 75%, Commitment Training 67%, Relationship Quiz 42%.	Confirmed	FS-10
ISS-09	Medium	Lead handoff depends on a Slack ✅ reaction and a regex reading the bot's message text.	Zap "(New Lead) Setter React"	Confirmed	B2
ISS-10	High	Every booking creates a new $7,200 deal, even when one is open.	7 leads have 2 to 3 open Interview opps created hours or days apart, including a signed client and an NGMI lead.	Confirmed	B1
ISS-11	High	Reschedules come through as new bookings. The Zap filters on `rescheduled = false`, but Calendly sets that flag on the canceled original, and the new booking arrives with `rescheduled = false` and `old_invitee` set.	Zap filter config plus Calendly's reschedule docs	Confirmed	R3
ISS-12	High	Calendly cancellations never reach Close. Cancels only register if a rep changes the Close status by hand.	Calendly has three "new booking" webhooks to Zapier and none for cancellations. 55 of 97 direct bookings since Sept 1 were canceled by the host; 10 of those leads still show "New Lead - DCB" and 20 still hold an open $7,200 deal.	Confirmed	R2
ISS-13	High	Re-opt-ins knock leads back to "New Lead".	8 leads currently in New Lead that hold Lost, Interview or Pending Close opps. Close history shows moves such as Canceled to New Lead, No show to New Lead, Closer Follow Up to New Lead, and New Opportunity to New Lead.	Confirmed	FS-08

ID	Sev	Issue	Evidence	Status	Fix
ISS-14	High	Source fields are overwritten on every touch, so first-touch attribution doesn't exist.	Update steps in 8 Zaps write Opt Source and Applied Source unconditionally. 30 leads now show Opt Source "Setter Booking".	Confirmed	FS-08, N2
ISS-15	Medium	The DCB Zap labels every direct booking "Paid Ads", including the Instagram (DCBIG) and email (DCBE) links.	Calendly: 81 DCBA, 12 DCBIG and 4 DCBE bookings since Sept 1, all written to Close as Paid Ads	Confirmed. Meaning of A, IG and E inferred from the names; Mitch to confirm.	FS-15
ISS-16	High	Payment amounts with cents are corrupted in Close. The Zap builds cents by appending "00" to the dollar text.	EOC cash $1,133.33 became a $11.33 opp. Every amount with decimals is affected.	Confirmed	FS-04, C1
ISS-17	High	EOC updates whichever opp Close returns first.	Zap config ("first" result). A signed client still holds 2 open Interview opps.	Confirmed	FS-22, B1
ISS-18	High	Pipeline is inflated with dead deals.	$700,800 open across 98 opps. 15 leads in DQ, NGMI, Canceled, No show or signed statuses hold open sales opps worth $136,800.	Confirmed	FS-18, FS-20, B1
ISS-19	Medium	Opps are created with a $7,200 placeholder value.	All 68 Interview opps = $7,200	Confirmed	B1 (no value until offer or close)
ISS-20	High	Payment plans are tracked in two places, and only one gets updated. Installment payments create new won opps in Close but never mark the Airtable installment paid.	4 EOCs report an in-house plan. 2 installment records in Airtable. 7 "Installment Paid" opps in Close.	Confirmed	FS-21, M1
ISS-21	High	Fanbasis payments don't update Close.	Fanbasis Zaps write to Airtable and Slack only	Confirmed	M1
ISS-22	High	Payments aren't linked to customers or reps, which misclassifies cash.	18 of 43 payment records unlinked. 8 first-ever payments ($16,100) are classified "Recurring" because they're unlinked, so New Cash is understated by that amount.	Confirmed	M1
ISS-23	High	Commission is calculated on payments with no rep attached.	26 payments with no closer carry $4,605 of closer commission and $912.50 of setter commission.	Confirmed	M1
ISS-24	Medium	No processor transaction ID is stored, so a replayed Zap would double-count.	Payment Records schema	Confirmed	M1

ID	Sev	Issue	Evidence	Status	Fix
ISS-25	Medium (latent)	EOC skips payment records for Whop, Shopify and Stripe, but only Fanbasis has a processor Zap.	Filter config. No loss yet, since every payment to date was Fanbasis.	Confirmed	FS-11
ISS-26	Low	Net amount is calculated two ways (Fanbasis earnings vs a hardcoded 3.9% fee).	Zap config	Confirmed	M1
ISS-27	Medium	Google Sheets act as an incomplete third ledger (Fanbasis new sales are missing).	Zap config	Confirmed	Retire once nobody reads them (confirm with Mitch)
ISS-28	High	No ongoing re-engagement. The only sequence was a one-time blast from Kimberly's main inbox that mostly failed.	759 leads enrolled in under a minute on Jul 15: 518 `account-failures` (Close couldn't send through the mailbox), 218 finished, 22 replied, 1 booked. 0 sequence emails since Sept 1.	Confirmed	Retire the Close sequence. Re-engagement runs as Kit blasts (outside scope).
ISS-29	High	Follow-up dates are collected but no task is created.	33 leads in Closer Follow Up, 19 open tasks org-wide, 9 overdue	Confirmed	FS-03, C1
ISS-30	High	No pre-call process in Close. Calendly sends its own confirmations and reminders, but texts only reach people who type in a number (39 of 97 direct bookings, 1 of 28 setter bookings).	Close and Zapier have nothing. Calendly event data.	Confirmed. Calendly reminder timing not visible through the API.	P1
ISS-31	High	No-shows and cancels get a Slack post only. Nothing goes to the lead and no task is created.	Zap config	Confirmed	R2, R1
ISS-32	Low	EOC Slack summary shows the 3rd installment date in place of the amount.	Code step maps `amt_3` to "Date of 3rd Instalment"	Confirmed	FS-01, C1
ISS-33	Medium	Call dates are converted UTC to UTC and stored date-only, so evening calls can land on the next day.	Comparing first calls: Close's date is exactly 1 day later than the closer's EOC date in 9 cases, 1 day earlier in 3.	Confirmed (pattern consistent with the UTC rollover)	B1
ISS-34	High	Systems join on email or rep name. No Close ID is stored in Airtable.	Schema. Lookups use name text and email.	Confirmed	N1, C1, Phase 1 backfill
ISS-35	High	One setter is missing from Rep Scorecard. The scorecard dropdown says "Sidonie Claurans"; EODs and EOCs say "Sidonie Chechin".	0 scorecard rows for Sidonie despite 59 EODs and 18 EOCs	Confirmed	FS-12

ID	Sev	Issue	Evidence	Status	Fix
ISS-36	Medium	Rep attribution is missing on EOCs.	Setter blank on 157 of 183, closer blank on 54 of 183	Confirmed	C1 (required fields)
ISS-37	Medium	Duplicate leads and missing phones.	15 emails on more than one lead (33 leads). 508 leads without a phone.	Confirmed	FS-18, N1
ISS-38	Medium	Lead Base is a partial copy of Close.	825 vs 1,481	Confirmed	Phase 1 backfill
ISS-39	Medium	Airtable "Minutes to Claim" measures nothing (date-only field, set by the Slack reaction).	Median 0, two negative values	Confirmed	D2
ISS-40	Low	Close fields Fathom URL and Traffic Type are never filled, though every EOC has a Fathom link.	0 of 1,481 filled	Confirmed	FS-02, N2
ISS-41	Medium	Kit runs before Close in 6 Zaps, so a Kit failure stops the lead reaching Close.	Zap config	Confirmed	FS-09
ISS-42	Medium	No error alerting. The 88-step EOC Zap can write Slack and Sheets, then fail before Close and Airtable.	Zap config. Actual failure rate unknown.	Confirmed (config). Failure rate unverified until the Zap History export is provided.	C1. Optional: one Zap error alert Zap.
ISS-43	Low	Zapier acts in Close as Kimberly, so the audit trail can't tell automation from owner.	Status history attributes Zap-driven changes to "Kimberly Rae"	Confirmed	Optional: dedicated Close automation user
ISS-44	Medium	Config is hardcoded and partly hidden. A Zapier Table (`01KS2T7RQ0MGGM5C8645K8RDHP`) maps EOC answers to Close status IDs, and channel, field and status IDs are hardcoded across Zaps.	Zap config	Confirmed	C1 (IDs live in one config block), SOP-15
ISS-45	Low	4 near-identical Kajabi Zaps.	Zap config	Confirmed	N1
ISS-46	Low	New Google Workspace accounts start with one shared hardcoded password, with no forced change.	Zap config	Confirmed	FS-13
ISS-47	Low	Leftover Zaps: an empty draft, and the DocuSign Zap switched off.	Zap list	Confirmed	FS-17
ISS-48	Medium	Smart views filter on "lead updated", and every automation update resets that time, so leads drop out of working views.	Smart view definitions (Gold Rush, 3 Day No Book, No Shows, Re-Engagement)	Confirmed (config). Effect on specific leads not measured.	FS-19 (L1)

ID	Sev	Issue	Evidence	Status	Fix
ISS-49	High	The sales process is tracked twice: lead statuses (setter and closer stages) and one deal pipeline. They disagree.	15 leads in DQ, Canceled, No show or signed statuses still hold open deals. Deals only start at booking, so there is no "Not Booked" stage.	Confirmed	FS-20, B1
ISS-50	High	Agreements: the "New Contract > Slack" Zap is off, so a signed agreement updates nothing (not Slack, not Close).	Zap status off	Confirmed	A1
ISS-51	High	The "Gold Rush (Paid Ads)" smart view requires all three source fields to say "paid", so it hides paid applicants who never booked.	Shows 94 of 223 paid leads	Confirmed	FS-19 (L1)
ISS-52	Medium	No smart lists for 3 to 7 day leads, cancellations or reschedules. "3 Day No Book" covers 0 to 3 days.	Smart view definitions	Confirmed	FS-19 (L1)
ISS-53	Medium	No show/no-show field on the lead or deal, so show rate can only come from Airtable.	Close field list	Confirmed	C1, N2
ISS-54	Medium	Fathom recordings never reach Close, and Slack gets the typed EOC summary, not the recording summary.	Close Fathom URL field empty on all 1,481 leads	Confirmed	C2
ISS-55	High	Host cancellations on direct bookings carry no reason and leave no trace in Close, so screened-out leads look like open pipeline and canceled leads get no follow-up.	55 of 97 direct bookings canceled by the host since Sept 1, 0 with a reason	Confirmed	R2

Corrections from earlier drafts

- Retracted: "12 Close seats including duplicates." Only 4 memberships are active. The other 8 are already deactivated.
- Narrowed: paid vs organic. The lead-level split is broken (ISS-01). The call and cash split runs off a manual dropdown (ISS-02).
- Sharpened: finance periods. The missing records are specifically renewals and back-dated entries (ISS-04).
- Widened: deposits. Installment payments are also counted as closed deals (ISS-05).
- Downgraded: the onboarding password, to Low.

Part 6: SOPs to write

None of these exist as written procedures in the systems reviewed. Leah writes each one after the matching build, so it describes how the system actually behaves.

ID	SOP	Covers	Linked items
SOP-01	Lead and source standards	Required fields, what each source field means, never create a lead without searching first	N1, N2
SOP-02	Pipeline stages and statuses	What each deal stage and lead status means, who sets it, what it triggers	FS-20
SOP-03	Working the smart lists	Which list to work in which order, how to log attempts so lists stay accurate	FS-19
SOP-04	Booking and rescheduling	Which Calendly event to use, always reschedule through the reschedule link, never cancel and rebook	B1, R3
SOP-05	Submitting the EOC	One per call, required fields per outcome, deposits logged as Deposit, follow-up date required for Offer Made	C1
SOP-06	Correcting an EOC	Edit, never resubmit. What to fix by hand downstream	C1
SOP-07	No-show, cancel, reschedule	Moving the deal to the right stage, what the drip already sent, when to mark Lost	R1, R2, R3
SOP-08	Deposits and payment plans	Logging a deposit, entering a plan, changing plan terms	C1, FS-21
SOP-09	Unmatched and failed payments	Where alerts land, how to link a payment, how to follow up a failed card	M1, M2
SOP-10	Refunds and chargebacks	Recording a refund so clawback and Close update	M3
SOP-11	Agreement and client handoff	Sending the agreement, what happens on signing, checking the onboarding steps	A1, A2
SOP-12	Rep onboarding	Google account, Close seat, User ID Lookup row (Close ID, Slack ID), Calendly, Slack channels	T1
SOP-13	Rep offboarding	Deactivate Close, suspend Google, remove from Calendly round robin, reassign open leads and deals, remove from Slack	T1
SOP-14	Weekly report and data check	Reading the weekly numbers, working the data check list	D2, D3
SOP-15	Changing automations safely	Change IDs in one place (the code config block), test checklist, change log, never rename a status or dropdown value without checking which Zaps use it	All
SOP-16	Adding a lead source, form or event type	Add it to the source dropdowns and the Zap lookup, test one submission end to end	N2, B1
SOP-17	Connections and API keys	Which account each Zapier connection runs as, rotating keys when someone leaves or a key is shared	All

Part 7: build order

Each step gets tested before the next one starts.

1. Small fixes: FS-01 to FS-22. Most of the data damage stops here.
2. Close structure: N1 (Not Booked deals, using FS-20), N2 (source tracking).
3. Booking: B1, B2, R3.
4. Pre-call: P1, then switch off Calendly reminders.
5. Call outcome: C1, C2.
6. Recovery drips: R1, R2.
7. Money: M1, M2, M3.
8. Handoff: A1, A2.
9. Reporting: D1, then D2 and D3.
10. SOPs alongside each step. T1 can go any time.

Test every flow against: - a new lead - an existing lead - a lead in a closed status - a duplicate email - a missing phone - an amount with cents - a call after 8pm Eastern - a reschedule - a cancel
